github.com/madebysid/madebysid.github.io

Home Automation 2015
A fun experiment with the Internet of Things
Technologies   Node, React, Raspberry Pi

About Me

Perfection. In form and function.
A designer at heart, I believe the way a product looks and feels is just as important as the way it works. Motivated by an urge to experiment, I think the best way to innovate is to break things and think out of the box to fix them. I pride myself in being a developer who can get your project done from start to finish, and everything in between.

I love talking to people. Drop me a line.
